## 1. The Mattock (Skaphion)

The mattock, known as the "skaphion" in ancient Greek, was a versatile tool used for digging, tilling the soil, and breaking up hard ground. Its distinctive shape featured a broad, blade-like head attached to a long, straight handle.

The skaphion played a crucial role in farming, allowing farmers to efficiently prepare the land for planting. Its sturdy construction also made it suitable for digging trenches, irrigation channels, and other earthwork tasks.

## 2. The Adze (Skapane)

The adze, called the "skapane," was another essential tool for woodworking and construction. It resembled an axe, but with a blade that was set perpendicular to the handle. This design allowed for precise cutting, carving, and shaping of wood.

Carpenters used the skapane to create wooden beams, furniture, and other structures. It was also widely used in shipbuilding, where it was employed to shape the hulls and oars of ancient Greek vessels.

### **3. The Drill (Trypanon)**

The drill, known as the "trypanon," was a remarkable invention of ancient Greece. It consisted of a wooden or metal shaft with a sharp, twisted tip. By rotating the shaft with a bow or strap, artisans could bore holes into various materials, including wood, metal, and even stone.

The trypanon was essential for building, as it allowed for the precise joining and fastening of wooden components. It was also used in carpentry, metalworking, and the creation of musical instruments.

### **4. The Saw (Pristis)**

The saw, referred to as the "pristis," was a fundamental tool for cutting through wood and other materials. It featured a long, thin blade with sharp teeth, which were set at an angle for efficient cutting action.

Carpenters relied heavily on the pristis to create furniture, doors, window frames, and other wooden structures. It was also used in shipbuilding and in the construction of temples and other architectural marvels.

### **5. The Hammer (Sphyra)**

The hammer, known as the "sphyra," was a ubiquitous tool in ancient Greek society. It had a heavy, rounded head attached to a wooden or metal handle. The sphyra was used for a wide range of tasks, including driving nails, forging metal, and shaping stone.

Carpenters, blacksmiths, and masons all employed the sphyra in their respective crafts. It was also used in warfare, where it served as a formidable weapon for both offense and defense.

## **6. The Chisel (Glyptis)**

The chisel, called the "glyptis," was an indispensable tool for carving and sculpting. It had a sharp, chisel-shaped blade attached to a wooden or metal handle. Sculptors used the glyptis to create intricate carvings in stone, wood, and metal.

The glyptis was also used in fine woodworking, where it was employed for delicate cuts and the creation of decorative details. Its precision and control made it an invaluable tool for artisans and craftsmen alike.

## **7. The Pliers (Plieria)**

The pliers, known as the "plieria," were a pair of tongs used for grasping and manipulating objects. They had two arms that were pivoted together, with a serrated surface on the tips for a secure grip.

Blacksmiths used the plieria to hold and shape hot metal while forging tools and other objects. Jewelers also employed them for delicate work, such as bending and shaping wires.

These ancient Greek tools, preserved within the humble confines of my shed, offer a tangible connection to the past. They represent the ingenuity, craftsmanship, and everyday practices of a civilization that played a pivotal role in shaping the Western world.

Each tool, with its unique design and function, tells a story of innovation, practicality, and the enduring spirit of human endeavor. They serve as a timeless reminder of the ingenuity and creativity that has characterized human civilization throughout history.
